MANAGEMENT PLAN

for

PRICKLY PEAR

(Rope Pear)

(*Cylindropuntia* species)

BACKGROUND

Description: Rope Pear is one of the cactus family which is characterised by fleshy succulent stems. It grows up to 2m high with cylindrical segments. Flowers are dull red to purple. *Cylindropuntia* species are Statewide declared noxious weeds.

Declaration: The *Cylindropuntia* species are classified as Class 4 noxious weeds in the New England Weeds Authority Area.

Under the *Noxious Weeds Act of 1993* as amended:

- The control objective of Class 4 noxious weeds is that they must be managed in such a way as to 'minimise the negative impact of the weed on the economy, community or the environment of New South Wales'.
- The growth and spread of the plant must be controlled according to the measures specified in a Management Plan published by the Local Control Authority (in this case the New England Weeds Authority).
- The plant may not be sold, propagated or knowingly distributed.

CONTROL MEASURES

The New England Weeds Authority will control *Cylindropuntia* species growing on all land for which it has the responsibility to control weeds under the *Noxious Weeds Act 1993*.

Owners/Occupiers of land are required to actively control *Cylindropuntia* species to prevent them from spreading, and their numbers and distribution must be reduced.

Owners/Occupiers of infested land are required to control *Cylindropuntia* species in the following manner:

- (a) **CHEMICAL** – The *Cylindropuntia* species is to be treated with a herbicide registered for their control, in the manner specified on the label; OR
- (b) **MECHANICAL** – The *Cylindropuntia* species is to be physically removed and buried; OR,
- (c) **BIOLOGICAL** – A suitable biological control agent is to be placed on or in close proximity to healthy *Cylindropuntia* plants and encouraged to establish.
